PRESS RELEASE

Vanderbilt releases Milestone Plugin for SPC intrusion system

14th December 2017 - [Vanderbilt](#), a global leader providing state-of-the-art security systems, announced today the release of a Milestone plugin for SPC Intrusion system.

SPC protects businesses, properties, and assets for users who want an intrusion detection system that offers versatile operation and comprehensive alarm management functionality. Using cloud services, end-user apps, and a dedicated software suite, SPC is at the forefront of modern intrusion detection.

The SPC Milestone plugin allows users to trigger off events and control SPC systems from within the Milestone system. When installed, the plugin allows for a 30-day trial for up to two panels and will allow the display of areas, zones, doors and outputs from the Milestone Map interface.

The plugin uses FlexC to communicate with the panel and when a license is purchased from Vanderbilt it will support up to 20 SPC systems. The license also provides customers with one year support and availability to updates. The plugin is compatible with SPC 3.6.6, 3.7.1 and SPC 3.8.

The plugin is aimed at improving the customer experience by providing a bi-directional communication strategy with the enhancement of a powerful surveillance solution. In line with the mantra of customer first, the SPC Milestone plugin features options such as filters for event transmissions, remote interaction based on customizable command profile, while ATS/ATP logs offer transparent transmission.

The instant and remote access to any potential alarm helps save a huge amount of time for those involved in maintaining the system. For example, through the plugin, when an alarm is generated the icon on your monitoring screen will go red, cameras can be triggered, and the Milestone client can display the relevant information. By right-clicking the icon, you can check the status of the alarm and a further right-click action will restore the alarm and switch the icon back to green.

The deep integration means that when the system is configured the information is automatically imported into Milestone where names of areas, zones and doors appear allowing for a smooth configuration experience.

"At Vanderbilt, we are proud to be a platform that supports an integrated environment and we aim to deliver a solution that will provide Milestone and Vanderbilt`s mutual customers with the tools they need to deliver the best solutions for their customers" says John O'Donnell, Product Manager at Vanderbilt Industries.

For more information on this plugin, check out this short video.

About Vanderbilt
Vanderbilt is a global provider of security systems, operating efficiently in 95 countries. Vanderbilt designs, manufactures and distributes systems that safeguard environments and organizations of all sizes. Agility, adaptability, and dependability are distinctive marks of the Vanderbilt brand and these decisive traits satisfy a broad variety of customers' application needs across banking, education, healthcare, retail, and more. Our product lines include access control, intrusion and video. To learn more, please visit www.vanderbiltindustries.com, or follow us on Twitter, Facebook and LinkedIn.
